

Training Design and deploy a Microsoft Exchange Server 2016/2019 environment

SII-226 5 Days (35 Hours)

Description

The developments in Microsoft Exchange Server 2016/2019 aim to make the new features deployed over the months on Office 365 accessible on site. Exchange 2016 thus offers many new features in order to improve the user experience and interoperability with other tools. of Microsoft's unified communications offering (SharePoint, etc.) while offering more flexibility and strengthening message protection and security. This training provides you with the skills and knowledge necessary to administer a Microsoft Exchange messaging environment on a daily basis. It allows participants to learn best practices to optimize the deployment and operation of Exchange Server 2016/2019 infrastructure. Participants will learn how to plan, install and manage mailbox management, client access and message routing features.
