Microsoft 365 - Hybrid deployment of SharePoint servers

★★★★★

SII-250   5 Days (35 Hours)

Description

There are two main reasons for choosing a SharePoint deployment in hybrid mode: if SharePoint is already deployed on-premises and a gradual migration to the cloud is being considered, or if for reasons specific to it, the he company wants to have some data on-premises and some in the cloud. In both cases, administrators must ensure that this distribution of data and tools does not impact the fluidity and simplicity of the user experience: research must be able to be carried out on both infrastructures, interfaces and access. will have to merge, etc... It is precisely with this perspective of coexistence that this training was designed which presents in detail all the implementation tasks (server on site and server in the cloud) guaranteeing efficient operation optimized for this hybrid mode. Migration to the full cloud is also covered by the program.

Who is this training for ?

For whom

Administrateur Teamwork Microsoft 365
Prerequisites

Aucune

Training objectives

- Understand how to install and configure SharePoint 2019 and implement high availability
- Understand the authentication framework in SharePoint 2019 and the concepts of federated identity
